

Earring hook

A traditional earring hook ending in a 4 mm ball with a threaded hole that can accommodate any of our bead pins. When creating earrings you can melt the glass directly on the rod so no end-piece is necessary. If you melt a glass on total length of the rods, please let free the end of pins or cover the end (3-4mm) of the pin with "bead release". You can melt the glass just the on last 3-4mm of the pins to close it, this case the pin do not need a special handling. Use always a controlled kiln cold down for glass.

1 pair of earring hooks / package, no other elements (pins or endbeads) included
